Scan for my portfolio

I started coding at 12, then went to business school to understand the problems worth solving. That mix led me to product, then to co-founding Topo in 2022, where as CTO I rebuilt the company around an AI agent. Next: a hands-on role building AI agents that solve real business problems, with customers.

### Y Combinator
YC helped us pivot to an AI SDR, starting again from a blank page

### $1M ARR in 3 months
From launch; now 150+ B2B customers including Air France, Aircall

### ×4 PRs per engineer
AI supercharged delivery while bugs per change fell by 63%

## EXPERIENCE

### Topo (YC W24) — Co-founder & CTO
2022 – Present

Founded 2022, pivoted to an AI SDR in 2024 · raised $4M (YC, Kima).

#### Product & platform

- **Product.** 50 calls with heads of sales showed the #1 pain was pipeline; built our AI SDR with users and signed first customers in days.
- **Enterprise-ready.** SOC 2, SAML, CRM integrations, workflow builder, API, MCP: the stack that opened accounts like Air France.
- **Reliable at scale.** Scaled to 10M+ agent actions a month and a ~1B-document search index, with no dedicated ops team.

#### AI engineering

- **Agent core.** Built the agent: skills, memory, MCP ingestion, headless runs; gains came from context (CRM, calls, tools), checked by evals.
- **Leverage by design.** Kept the tech team at four by designing for minimal human attention: behind strict CI, 95% of PRs are AI-only and 80% merge with no human review; I stay top contributor at 200+ PRs/month.
- **Learning loop.** Set up a company brain fed by customer calls and all our tools; agents turn feedback into a PR with a demo video, an engineer checks behavior: improvements are shipped in under 10h (p80).

### Flatlooker, now Manda — Head of Engineering
2019 – 2022

100% online rental agency · raised $2M · acquired 2022 · joined as PM

- Digitized the last offline steps (keys, mail) to scale from 5 to 60 cities.
- Hired a team of 10, incl. product and data; led the team to the acquisition.

## EARLIER EXPERIENCE

**Product Manager** — BTU Protocol 2018 – 2019
**CTO** — Course Croisière EDHEC (non-profit) 2015 – 2017
**Data scientist** (intern) — Jalgos 2015

## EDUCATION

**EDHEC Business School** — MiM, MSc Data Analytics & AI 2015 – 2019
**Saint Jean de Douai** — Classes préparatoires ECS 2012 – 2015

## SKILLS

**AI**
AI agents, LLMs (OpenAI, Anthropic, Gemini), Jev, LangGraph, PydanticAI, RAG, MCP, prompt & context engineering, LLM evals, loop & harness engineering, durable execution

**Code**
TypeScript, Python, Go, Rust, SQL

**Systems**
Next.js, Postgres, ClickHouse, Elasticsearch, Temporal, Redis, AWS, GCP, Kubernetes, Terraform, Datadog, OpenTelemetry, Distributed systems

**Customer-facing**
Discovery calls, pre-sales demos, POCs, solution design, enterprise rollouts

**Leadership**
Built 2 tech teams from zero, hiring, coaching, turning engineering teams AI-native

**Languages**
French (native), English (fluent)

## AI ECOSYSTEM

**Invited to the Élysée** 2024
Among France's top AI talents

**Hackathon judge** 2024
Mistral AI

**Speaker** 2024
LangGraph in production
